

DRAINAGE SYSTEM INSPECTION

July 12, 2001

The attached letter dated 4/7/92 indicated the requirements for a sump crock to be installed for storm drainage systems.

Item –C- of the ordinance requires that whenever a building needs footing drains, a sump crock must be installed.

Requirements for a drainage system and inspections of the drainage system are functions of the building code.

Therefore the building inspector as part of his inspection of the tile system will insure that the drainage tile terminates in the proper sump crock ordinance.

The plumbing inspector will inspect the pump and discharge piping.
